

# SYMMONS® Symmetrix®

## Lavatory Faucet S-20 Series

### Installation and Service Instructions

#### Installation

Caution: Be sure to turn off hot and cold water supplies before installing or servicing faucet.

- Loosely install the anchor bar (KN-23), spacer (KN-26) and nut (L-36) on the mounting bolts and place gasket on base of faucet. Push faucet supplies and anchor bolt/spacer/nut assemblies with gasket through holes in sink. Secure faucet to sink by tightening nuts from underside. (If sink or counter surface is uneven, use putty or sealant to make proper seal under base.)
- Connect hot supply to left tube and cold supply to right tube using appropriate connectors.
- Pop-up drain installation:
  - Remove pop-up plug, tail piece and flange from the drain body. Make sure that locknut is threaded all the way down onto the body with flat friction washer in middle and beveled washer on top.
  - Apply plumbers putty or sealant to bottom of flange.
  - Install drain body through drain opening in lavatory and screw flange onto the drain body making sure that the threads are completely engaged for proper sealing and strength of the connection. Apply joint compound to all threaded parts to insure proper seal.
  - Tighten locknut to compress the beveled flange evenly across the bottom of the drain opening taking care not to over tighten the locknut, causing damage to the lavatory.
  - Remove one of two ball washers from inside the threaded cavity. Insert pop-up plug and pivot rod into body. Add one ball washer (the second ball washer should remain inside the body) to the outside of the ball. Tighten the retaining nut until the ball is seated on the internal and external ball washers.

Note: The pop-up plug can be installed either in the removable or non-removable position, depending on the location of the hole located in the guide at the bottom of the plug.
  - Slide the pivot rod through one side of the spring clip, then the appropriate adjustment hole and then other side of the spring clip.
  - Insert lift rod through faucet housing and the top of the lift strap and secure it in place by tightening the screw.

Note: To ensure proper operation of lift rod and pop-up, some adjustment of the linkage may be required. There are two possible adjustment points: 1) lift strap to lift rod and 2) lift strap to pivot rod.
- It is very important to thoroughly flush the supply lines to prevent foreign matter, i.e. copper chips, sand, stones, etc. from damaging the sealing surfaces of cartridge.

Remove aerator and turn valve handle on to full cold position, open cold supply. Without closing, turn handle to full hot and open hot supply. Let water run in hot only and cold only positions long enough to flush supply lines thoroughly. Shut off faucet and replace aerator. Check for leaks.

- The handle limit stop can be set to limit handle turn to the hot position. The limit mechanism is factory set to allow full handle travel. To adjust the limit stop, turn handle to the full hot position and lift handle to open faucet approximately half way to obtain a smooth flow for correct initial temperature measurement.
- If when faucet is on and in full hot position and water is too hot, remove plug button (KN-157), loosen set screw (L-22) and remove handle (KN-3RB, KN-3BRB or LN-135). Lift limit stop ring (KN-4L) using a small flat head screw driver and rotate counter clockwise to lower temperature. If water is not hot enough, rotate clockwise (See Figure 1 on reverse side). After correct temperature is achieved, reattach handle, reversing procedure above.

Stop limit adjust

#### Replacing cartridge (KN-4)

- Remove plug button (KN-157), loosen set screw (L-22) and remove handle (KN-3RB, KN-3BRB or LN-135).
- Engage tabs in cartridge wrench (LN-34) with slots in compression ring (KN-2) and use screwdriver in wrench holes or pliers on wrench and turn counter clockwise until compression ring engages with cap (LN-8). Continue turning counter clockwise so that cap/ring assembly is removed from the body (LN-371). Remove cartridge and three ring seal (KN-4).
- Install new cartridge while taking care to maintain position of the three ring seal at the base of the cartridge. Match posts in base of cartridge with alignment holes in valve body during assembly.
- Reassemble faucet in reverse fashion. Thread cap onto body firmly by hand. Do not use a wrench which may damage the finish. Tighten compression ring (KN-2) finger tight using the wrench (LN-34) then 1/4 to 1/2 turn further.
- Set hot water limit stop in accordance with installation step 5 above.

## Dimensions Symmetrix Lavatory Faucet, S-20-2

**Note:** Dimensions subject to change without notice.

## Parts Assembly Symmetrix Lavatory Faucet, S-20 Series

- KN-2 Compression ring
- KN-3RB\* Solid handle
- KN-3BRB\* Loop handle
- KN-4 Cartridge
- KN-4L Limit stop ring
- KN-23 Anchor bar (2)
- KN-26 Mounting spacer (2)
- KN-157 Plug button
- LN-8\* Valve cap
- LN-11\* Screw (2)
- LN-15\* Aerator without removal key
- LN-34 Cartridge wrench (not shown)
- LN-135 6" lever handle with red/blue indicators
- LN-363\* Undercover plate
- LN-364\* Shell
- LN-364LH Shell (without lift-rod hole)
- LN-370 Mounting gasket
- LN-371 Cartridge housing assembly
- L-22 Set screw
- L-36 Mounting nut (2)
- L-42 Nut (2)
- P-25\* Pop-up drain assembly (complete)
- P-26 Grid drain assembly (complete)

For Decorative Finish Faucets add suffix to parts marked with an asterisk as follows:

Suffix -STN Radiance® Satin finish

Aerator (flow regulator)	Part Number	
	Standard Aerator	Vandal Resistant with removal tool
2.2 gpm (8.3L/min)	LN-15*	LN-101*
1.5 gpm (5.7L/min)	FLR-111-1.5*	----
1.0 gpm (3.8L/min)	FLR-111-1.0*	----
.5 gpm (1.9L/min)	----	LN-100*
Removal tool part number, LL-60K
