

# Temperature calibration Calibration de la température

## During the installation - Pendant l'installation

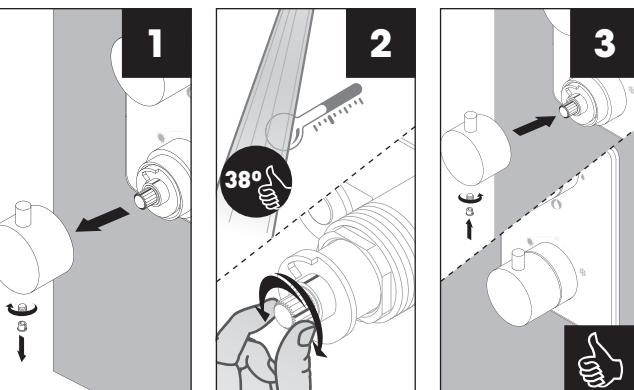

The valve has a security button at 38°C, however the temperature can be adjusted to a maximum of 43°C.

1. Before securing the temperature handle, align the black lines on the cartridge body and the spindle; this calibrates the cartridge.
2. Place the temperature handle on the cartridge, aligning the button with the "38°C" marking on the plate.

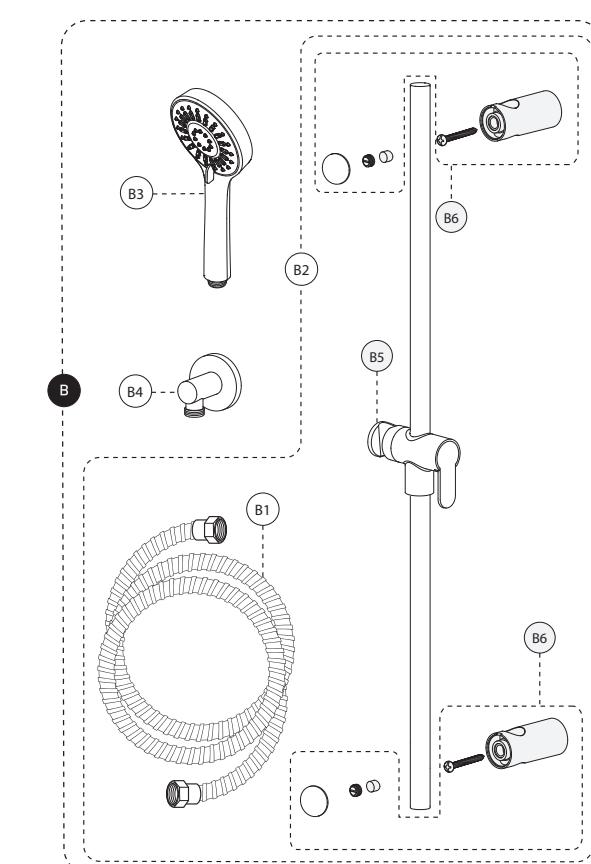

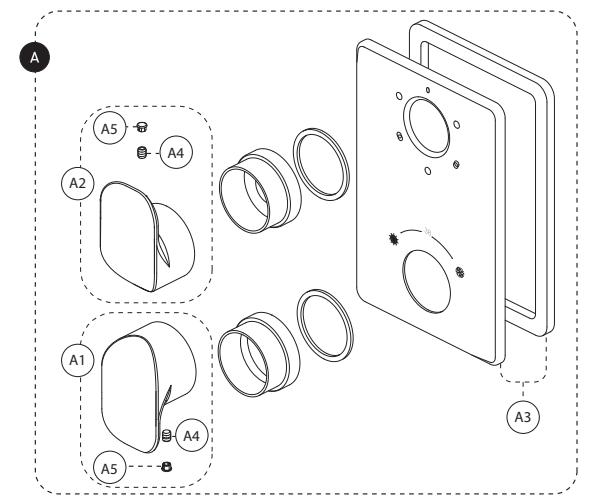

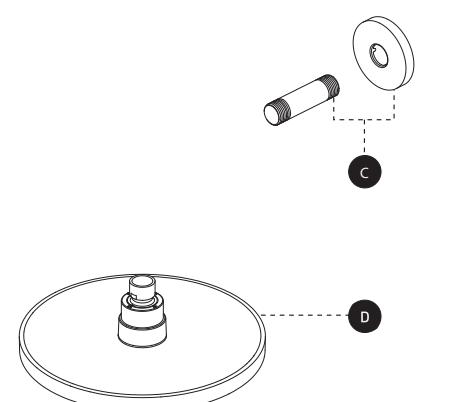

## Recalibration

1. Remove the temperature handle from the cartridge by loosening the Allen screw.
2. Turn water on and measure its temperature using a thermometer. If it is below 38°C, turn the spindle slightly counterclockwise. If the temperature is above 38°C, turn the spindle slightly clockwise, until you reach 38°C.
3. Place the temperature handle back on the spindle aligning the button with the "38°C" marking on the plate.

No	Description	Part Pièce
<b>A</b>	Valve - Trim for Thermostatic Diverter Valve with Volume Control	Valve - Garniture pour valve thermostatique, déviateuse avec contrôle de volume
<b>A-1</b>	Thermostatic handle kit	Ensemble de poignée pour valve thermostatique
